Abstract

Townsend, E., Stone, S. D., Angelucci, T., Howey, M., Johnston, D. & Lawlor, S. (2009). Linking Occupation and Place in Community Health. *Journal of Occupational Science*, 16(1), 50-55.

Although the links between occupation and health have been studied historically for some time, little attention has been paid to the links between occupation and place. This article examines links between occupation and place: we argue that to promote inclusive social participation in all occupations, not limited to work, communities need to organize health services with a policy mandate and funding for addressing what people do and the social determinants that influence what they do in particular places. This claim is developed with reference to four vignettes that show the marginalizing influences on social participation when key social determinants of health are problematic – when transportation is inaccessible, weight loss and exercise programs are unaffordable, employment support is minimal, and there is insufficient low cost housing.

於社區衛生中連結職能與地方

雖然職能與健康的連結已經有了一些歷史性的研究，但有關職能與地方的連結則較少受到關注。這篇文章調查職能與地方的連結：我們主張，為了促進所有職能活動之融合性社會參與，而不只限於工作，社區需要有一套政策命令與資金來組織健康服務，說明在特定的地方人們做什麼，以及影響人們做什麼之社會決定因素。這個聲明是參考下列四個顯示當關鍵社會決定因素有問題時，對社會參與造成邊緣化的影響之描述而發展的一當交通運輸工具難以得到、減重及運動課程無法負擔、受雇支持十分有限、以及缺乏足夠的低價住宅。
